Exposure for the joint system shall be four (4) feet in one axis, 10 feet in the other axis, except for the joint system for the 1000 ft. or greater span system. The joint system shall be installed on a bed of sand, gravel, or crushed stone, and be placed in a smooth, uniform, and level bed and be of uniform thickness. The joint system shall be installed to the extent of the product.

Joint dimensions are based on installation of 60°F. The expansion for other dimensions shall be increased or decreased according to the formula: $\Delta L = L \alpha \Delta T$, where ΔL = for, L = length of joint, α = coefficient of expansion for steel, and ΔT = difference in temperature of installation.

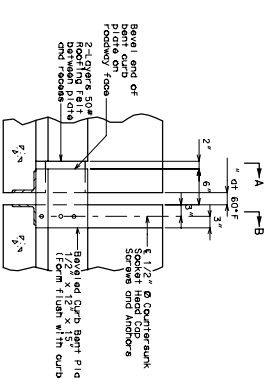

Structural steel for the expansion joint system shall be ASTM A709 Grade 50, minimum yield strength of 50 ksi. The expansion joint system shall be in accordance with sec. 772.
